Pacific Bells Fiber Network Advantage: The Best Value for High Performance and Reliability

- Disaster Protection:**
 - Strategically located central offices throughout the state with diverse routing options.
 - A predominance of fiber optic rings providing self-healing routing capability.
 - Fiber in separate conduit structure at least 24 inches underground.
- Network Management:** Our state-of-the-art fiber network is monitored around-the-clock and is backed by a century of reliable network management experience.
- Quality:** Fiber optic technology makes it possible to transmit 800% more data than standard copper wire, to more locations, in a fraction of the time. What's more, fiber is more flexible, more reliable and provides a clearer, clearer signal than copper.
- Growth:** This cost-effective digital transport solution is ready to grow with your changing needs.
- Availability:** Pacific Bell's fiber network is widely deployed. And because all of our wire centers are interconnected, you can now communicate via fiber throughout the state.
- Service:** We back our services 24 hours a day, seven days a week.
- Performance:** No one exceeds Pacific Bell's standards for fiber performance.
